

HR Report Agent v1.7.21 - User Manual

1. System Overview

A deterministic daily/weekly report generator for HR. All numbers come from calculations and database queries - never from LLMs.

2. Complete Workflow

Step 1: Create a Run

Open Calendar -> click a blank workday -> system creates a new Run.

Step 2: Upload 4 Source Types

- Personnel (.xlsx/.xls): employee roster with ID, name, BU, hire/leave dates
- Resignation (.xlsx/.xls): resignation process records
- Release/OA (.xlsx/.xls/PNG/JPG): OA protocol; images need vision LLM
- Recruitment (.xlsx/.xls/PNG/JPG): offer stats; images need vision LLM

Drag-and-drop supported. Click or drag files into each source slot.

Step 3: Human Review

Confirm OCR results and fill missing values. Use Batch Confirm for multiple items. Confirmed decisions can be undone.

Step 4: Preview & Publish

Click Preview -> review Daily Row2-Row40 and Weekly summary -> Publish. Weekly reports only publishable on the last workday (usually Friday).

Step 5: View & Download

Visit Daily/Weekly pages to view history, download Excel or execution logs.

3. Rules & Limitations

3.1 Immutability

- Published reports CANNOT be modified (audit trail).
- Frozen Run inputs CANNOT be replaced individually - use Same-Day Revision.

3.2 Same-Day Revision

To correct a published report: (1) click Create Revision Run, (2) re-upload ALL 4 sources, (3) confirm decisions, (4) preview, (5) publish. New version supersedes old one. Sources are NOT auto-inherited.

3.3 Chain Baseline

MTD/YTD values (Row8/9/13/14/30) chain from the last published daily. First-time use auto-starts with zero baseline.

3.4 Image Recognition

- Release & Recruitment support PNG/JPG via vision LLM (Qwen3.7-plus).
- Without vision LLM configured, images rejected - use Excel instead.
- Results require human confirmation before calculation.

3.5 System Requirements

- MySQL 8.0+
- Redis 5.0 (Windows max supported version)
- Python 3.12+
- Alibaba Bailian LLM API (text + vision)

- Chrome / Edge latest

4. FAQ

Q: Preview button grayed out?

A: Hover to see reason: missing sources, pending decisions, or missing baseline.

Q: Image upload taking forever?

A: Vision LLM takes 1-5 min. If timeout, use Excel instead.

Q: "Baseline missing" error?

A: Normal for first use. System auto-starts with zero baseline.

Q: Weekly button shows "not due"?

A: Weekly reports only publish on last workday (Friday).

Q: Numbers look wrong?

A: Check Compute Log page for per-row formula trace.

Q: How to undo a decision?

A: Click the undo button on confirmed decisions (v1.7.21+).

5. Version History

v1.7.20 (2026-07): Mutable tables, single pipeline.

v1.7.21 (2026-07-21): Run workflow, immutable reports, auto baseline bootstrap, decision undo, batch confirm, drag-drop upload, filename display, Toast notifications.
